

# Detailed Table of Contents

## **Preface**

The pedagogical advantages of this text  
Overview of the text  
Benefits of studying this text  
Supplements  
Changes for this seventh edition  
Acknowledgments

## **Section 1 The Managerial Perspective**

### **1 Managing Data 16**

Introduction  
Individual data management  
Organizational data management  
Problems with data management systems  
A brief history of data management systems  
Data, information, and knowledge  
The challenge  
Exercises

### **2 Information**

Introduction  
A historical perspective  
A brief history of information systems  
Information characteristics  
Information and organizational change  
Information and managerial work  
Managers' information requirements  
Information delivery systems  
Information integration  
Knowledge  
Exercises

## **Section 2 Data Modeling and SQL**

### **3 The Single Entity 54**

The relational model  
Getting started  
Modeling a single-entity database  
Creating a single-table database  
Querying a single-table database  
Exercises

#### **4 The One-to-Many Relationship**

Relationships

Creating a database with a 1:m relationship

Querying a two-table database

Regular expression—pattern matching

Subqueries

Exercises

#### **5 The Many-to-Many Relationship**

The many-to-many relationship

Creating a relational database with an m:m relationship

Querying an m:m relationship

Key terms and concepts

Exercises

#### **6 One-to-One and Recursive Relationships**

Modeling a one-to-one relationship

Mapping a one-to-one relationship

Mapping a recursive one-to-many relationship

Querying a one-to-one relationship

Querying a recursive 1:m relationship

Modeling a recursive one-to-one relationship

Mapping a recursive one-to-one relationship

Querying a recursive one-to-one relationship

Modeling a recursive many-to-many relationship

Mapping a recursive many-to-many relationship

Querying a recursive many-to-many relationship

Exercises

#### **7 Data Modeling**

Modeling

Data modeling

Data model quality

Quality improvement

Data modeling hints

The seven habits of highly effective data modelers

Exercises

#### **Reference 1: Basic Structures**

One entity

Two entities

Another entity's identifier as part of the identifier

Exercises

#### **8 Normalization and Other Data Modeling Methods**

Multiple paths

Normalization

Other data modeling methods

Key terms and concepts  
Exercises

## **9 The Relational Model and Relational Algebra**

Background  
Data structures  
Integrity rules  
Manipulation languages  
A fully relational database  
Exercises

## **10 SQL**

Structured query language  
Creating a table  
Data types  
Collation sequence  
Scalar functions  
Formatting  
Table commands  
Data manipulation  
INSERT  
UPDATE  
DELETE  
SQL routines  
Universal Unique Identifier (UUID)  
Nulls—much ado about missing information  
Security  
The system catalog  
Natural language processing  
Connectivity and ODBC  
Embedded SQL  
User-defined types  
The future of SQL

## **Reference 2: SQL Playbook**

The power of SQL

## **Section 3 Data Science and advanced Data Management**

### **11 Spatial and Temporal Data Management**

Spatial data . . .  
Managing spatial data  
Data model mapping  
R-tree  
Managing temporal data  
Key terms and concepts  
Exercises

## **12 Graph Databases**

A graph database

Neo4j – a graph database implementation

A relationship between nodes

Key terms and concepts

Exercises

## **13 XML: Managing Data Exchange**

Four problems

SGML

XML

XML schema

XSL

XPath for navigating an XML document

Key terms and concepts

Exercises

## **14 Organizational Intelligence**

Information poverty

An organizational intelligence system

The data warehouse

Exploiting data stores

Data mining

Exercises

## **15 Introduction to R**

The R project

Datasets

Packages

File handling

Data manipulation with dplyr

Database access

Excel files

R resources

R and data analytics

Exercises

## **16 Data visualization**

Visual processing

The grammar of graphics

ggplot2

Some recipes

Geographic data

R resources

Exercises

## **17 Text mining & natural language processing**

The nature of language

Levels of processing  
Tokenization  
Sentiment analysis  
Corpus  
Readability  
Preprocessing  
Word frequency analysis  
Co-occurrence and association  
Cluster analysis  
Topic modeling  
Named-entity recognition (NER)  
Future developments  
Key terms and concepts  
Exercises

### **18 Cluster computing**

A paradigm shift  
The drivers  
The bottleneck and its solution  
Lambda Architecture  
Hadoop  
Spark  
Exercises

### **19 Dashboards**

The value of dashboards  
Designing a dashboard  
Dashboards with R  
Conclusion  
Exercises

## **Section 4 Managing Organizational Memory**

### **20 Data Structure and Storage**

The data deluge  
Data structures  
Data coding standards  
Data storage devices  
Data compression  
Key terms and concepts  
Exercises

### **21 Data Processing Architectures**

Architectural choices  
Remote job entry  
Personal database  
Client/server

Cloud computing  
Distributed database  
Distributed data access  
Distributed database design  
Key terms and concepts  
Exercises

## **22 SQL and Java**

JAVA  
Using SQL within Java  
JavaServer Pages (JSP)  
Exercises

## **23 Data Integrity**

Introduction  
Transaction management  
Protecting existence  
Maintaining data quality  
Ensuring confidentiality  
Key terms and concepts  
Exercises

## **24 Data Administration**

Introduction  
The Chief Data Officer  
Management of the database environment  
Data administration  
Database management systems (DBMSs)  
Groupware  
Data integration  
Conclusion  
Exercises
